

PageCenter Plus[®]

Archiving and Report Management

LRS

Most likely, your organization has hundreds or thousands of business-critical reports generated by a wide range of systems. These reports contain some of the most valuable data that your organization has at its disposal: quarterly projections, employee and client information, account status, and more. Too often, this valuable information remains locked away in multiple repositories or even in paper form, making it nearly impossible for managers to use the data to make timely, informed decisions.

PageCenter Plus® from Levi, Ray & Shoup, Inc. (LRS) has helped many companies consolidate their report information into an online archive. PageCenter Plus simplifies data retrieval, enables report mining, improves report security, and makes it possible to audit report access for

compliance with privacy laws and other regulations. All through a simple, customizable web interface.

For all these reasons, many customers find that

PageCenter Plus pays for itself within the first year. Savings include reduced printing and distribution expenses or replacing of disparate report archiving and viewing systems (e.g. microfiche). Other benefits

include the ability to extend report access to remote and mobile users. With PageCenter Plus, employees can analyze an entire report, and then email that data or extract it directly to a spreadsheet, without re-keying anything from hard copy reports.

PageCenter Plus® Solution

PageCenter Plus provides secure, electronic storage for computer generated reports, and allows users to access those reports, browse them, and mine the information they contain.

PageCenter Plus users can extract, summarize, and export data from thousands of pages of application output to create a single-page of critical decision support information.

Employees can analyze an entire report, and then email that data or extract it directly to a spreadsheet, without re-keying anything.

PageCenter Plus features:

- **Automated Distribution** – electronic report delivery immediately reduces the need to print and eliminates manual distribution costs.
- **Browser-based report access** – online viewing is available for users, including mobile or remote personnel, who need to review, search, or analyze report data.
- **Flexible Report Decollation** – break up reports based on any content in the reports.
- **Report Mining** – multiple generations of report information can be searched and results can be compared and extracted by pointing and clicking on desired fields. Users can run stored queries and automatically extract results without the risk of re-entry error. Results can be emailed or saved to a file for use with spreadsheets or other tools.
- **Report Archive** – reports are automatically stored in the PageCenter Plus archive so that information can be quickly retrieved at any time.

One organization spent \$120,000 a year in printing, creating microfiche, and delivering output to remote users. Using PageCenter Plus, they immediately reduced printing costs, ensured report delivery, and eliminated the need to tear reports down and haul them. Discontinuing microfiche production will realize an additional savings of more than \$5000 per month.

- **Security** – sensitive data contained in reports is protected with various levels of restriction based on report content. PageCenter Plus ensures authorized access to reports and provides user access logs for compliance with various regulations.
- **Annotation** – comments can be added to reports to streamline workgroup communication, page by page. Comments can be identified for public use or can be noted as private for viewing by just the individual user.

Outsource with Control

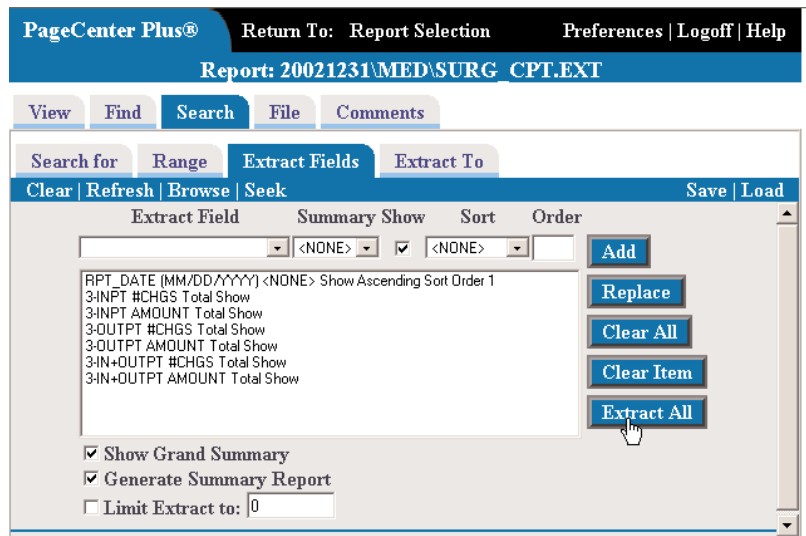

Organizations with large data centers, or that outsource their data center operations, sometimes feel that they are losing control of their data. Although the applications that generate output may be out of their control, PageCenter Plus can provide a department or outsourcing customer with local control over report access. Organizations can retain control by securely and automatically placing output into one accessible place, enabling cost effective control over report data for long-term management and analysis.

PageCenter Plus To-Go™ Feature

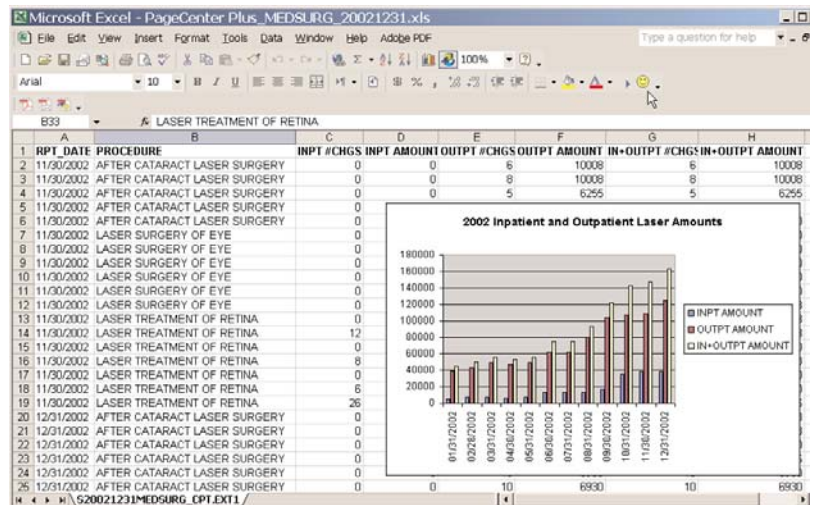

Organizations use PageCenter Plus To-Go and an existing CD or DVD production system to create discs for remote use that contain report data and a stand-alone Windows report analysis and viewing tool. A user simply places it in a local CD or DVD drive, enters the appropriate login ID and password, and selects a report to view.

Try PageCenter Plus

See for yourself just how powerful and easy PageCenter Plus is to use. Visit us online at www.vps.com or call us at 217.793.3800 to schedule an online PageCenter Plus web demonstration today!

Customize and save your report views, then automatically run with each generation.

Email reports as spreadsheets and automate charting data.

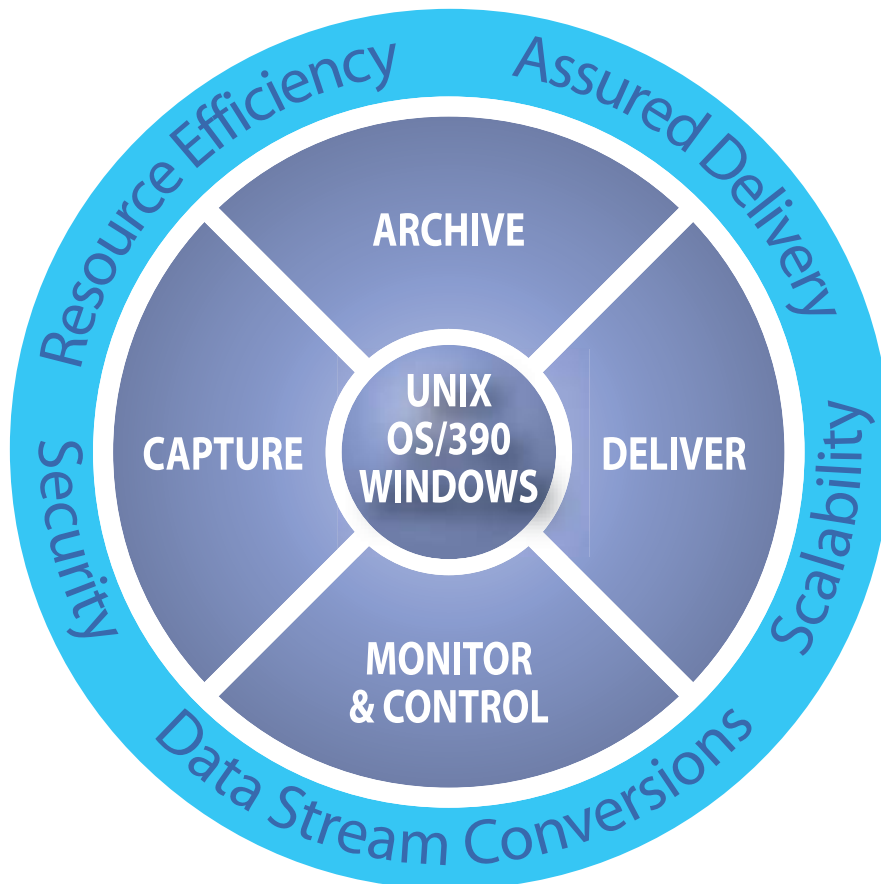

A thousand page report of sales transactions over a 30-day period can convert in a matter of seconds into single page summary of sales, by product, for the month; or, extracted to a spreadsheet indicating how much each salesperson sold, the number of sales they made, and the size of their average sale.

Enterprise Output Server

LRS offers the software solutions, which integrate seamlessly to provide a complete Enterprise Output Server – a single, highly scalable reliable server that can handle a large volume of documents. With LRS® solutions, you have the flexibility to implement the server components you need, including document capture, archive, delivery, and a consistent user interface regardless of the user's platform. Design your Enterprise Output Server to capture documents from all the platforms you use and deliver them to all the destinations on your network, including printers, fax servers, email addresses, and web browsers.

The PageCenter Plus® solution provides LAN-based archive functionality for long-term storage, fast retrieval, and powerful data extraction. PageCenter Plus quickly finds report data, and offers powerful search and query capabilities. Users can extract specific information from reports for immediate use. The Enterprise Output Server delivers reports, which PageCenter Plus compresses and can archive using long-term storage systems such as optical disk.

The Enterprise Output Managers

LRS has been providing Enterprise Output Management solutions that meet the evolving needs of organizations around the world. Ninety five percent of the Fortune 100 companies rely on our industry-leading software for managing and delivering their critical documents to diverse network destinations. In fact, more than thirty percent of these leading corporations have been using LRS solutions for more than two decades.

As the recognized Enterprise Output Managers, we are dedicated to constant innovation as we continue to develop the output management solutions that meet today's needs and anticipate tomorrow's demands.
